

CYBER SECURITY
FOUNDATION

CYBER SECURITY FOUNDATION

The first non-profit Italian
foundation in the cyber world

A foundation born to deepen and spread the security culture

that brings together on a single platform scholars, technicians, researchers, passionate people and experts that work in the cybersecurity field and are keen on cyber intelligence contents.

The Foundation

provides PAs and independent authorities with the technological tools and technical-scientific know-how in order to promote progress, technological innovation and foster the spread of a cyber security culture.

The goal

In line with its statutory aims the Foundation is called upon to implement innovative projects of interest of the government, public administration, the scientific communities and citizens.

The Foundation pursues the following goals:

Promoting technological innovation for the development and modernisation of the country, training, scholarships, university masters, conferences and congresses.

Transfer know-how for cyber security in PA.

Provide scientific and technological support to Institutions and to the enterprises.

Presiding over innovative areas of research, positioning itself as a reference point in the international scientific and technological panorama.

To implement public services for citizens that require particularly advanced scientific and technological skills.

To achieve the goals the Foundation:

- ✓ promote, design, organise, manage and deliver interventions of professional development and orientation in favour of public entities in cooperation with public and private universities.
- ✓ promote, design, organise and deliver interventions of training for trainers and advanced training in subjects inherent to the social and educational purpose.
- ✓ the Foundation shall establish one technical scientific committee and an advisory board.
